

GTECHNIQ

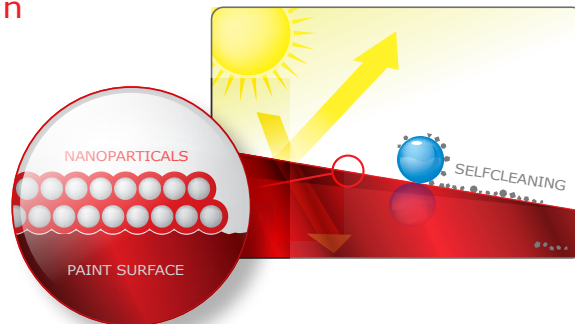

PLATINUM PAINT PROTECTION

GTECHNIQ Platinum Paint Protection forms a sub micron crystalline film which is extremely hard. This characteristic makes the GTechniq Platinum Paint protection extremely effective at preventing minor scratching from poor wash techniques on relatively soft automotive paint. Unlike regular polymer sealants, GTechniq Platinum Paint Protection actually becomes the functional surface of the vehicles paintwork. The GTechniq Platinum Paint Protection is a biomimetic coating which mimics the repellency of plants that repel water, oil and dirt in order to keep their leaves clean. The most commonly cited example in nature is the leaf of the lotus plant which if you examine under an electron microscope looks like the picture below. GTechniq Platinum Paint Protection works in a very similar way.

GTECHNIQ Platinum Paint Protection

Smart Surface Science Protects Against:

- » Colour Fading
- » Bird & Bat Droppings
- » Acid Rain
- » Tree Sap
- » Oxidisation
- » Bug Splatter
- » Road Grime
