The Stop, Tail and Indicator functions of this Maxus lamp are visualised via Light Guide technology. Where previously many tail lights have used numerous individual LEDs to create the overall light layout, we use a specially crafted "Light Guide", or channel, with an LED at each end shining through it to evenly distribute the light.

MaxiTRANS has announced the next generation LED tail light will appear on new trailers and truck bodies. It has allowed us to create a signature appearance on new MaxiTRANS vehicles and to offer a premium plug and play option to fit to other makes when purchased from MaxiPARTS.
