

# T9 SERIES WITH PLM INTELLIGENCE™

T9.450 | T9.505 | T9.560 | T9.615 | T9.670

**PLM**  
NEW HOLLAND INTELLIGENCE

# Our most precise and powerful 4WD tractor ever.

The new T9 Series with PLM Intelligence™ tractors showcase the best of New Holland's power, comfort, efficiency and versatility. Paired with PLM Intelligence™ connected features integrated into the tractor, the T9 Series tractor is the most advanced, most powerful 4-wheel-drive tractor New Holland has ever offered. Power truly meets precision in the new T9 tractor.

In the T9 Series tractor, operators experience New Holland's latest PLM Intelligence technology with all new in-cab controls that provide control and customisation without complication. The IntelliView™ 12 in-cab monitor offers quick configuration and advanced features such as custom layout options for each individual job and operator, 3-D maps, touchscreen or encoder navigation and seamless integration with PLM 1, PLM 2 and PLM 4 guidance subscriptions. Additionally, with the integrated MYPLMCONNECT™ telematics platform, producers can manage their farm, fleet and data seamlessly.

The PLM Intelligence platform is built to support continuing advancements in precision agriculture, keeping operators on the cutting edge. Through the platform's five-year Advanced Telematics in these models, producers can expect real-time connectivity to their New Holland dealer, improved profitability through remote software updates, diagnostics and data integration, and increased machine uptime. They can also expect the industry's best in guidance, an easier operator interface, and improved decision-making capability from data analytics.

# A new level of connectivity and productivity.

Through PLM Intelligence™, New Holland is unlocking a new level of connectivity and remote viewing never before seen in a 4-wheel-drive tractor. That's the inherent advantage of a new T9 Series tractor. In the T9 tractor, unmatched connectivity provides the ability to share information with your preferred providers, perform diagnostics remotely and make data-driven decisions related to your operations—all from any location and all designed to help you successfully manage your farm, fleet and data. You'll accomplish more in a single day, work smarter and more efficiently, and enjoy a superior level of control and management of your entire fleet.

## FARM MANAGEMENT

**GET MORE DONE EACH DAY.** Easily organise your fields, applications and agronomic data to gain better insights.

- ✓ View every field operation, from spring tillage all the way through harvest.
- ✓ Generate satellite maps to help visualise multiple layers of agronomic data to make more informed decisions.
- ✓ Push guidance lines, boundaries and prescriptions to equipment remotely.

## FLEET MANAGEMENT

**WORK SMARTER BY TRACKING EQUIPMENT.** Achieve peak performance by maximizing uptime and efficiency.

- ✓ Receive notifications and view critical operating parameters.
- ✓ Monitor current and historical machine performance.
- ✓ Plan and execute maintenance on connected vehicles.
- ✓ Coordinate your New Holland machines.
- ✓ Remote display viewing enables the farm manager or dealer to view—with the permission from the operator—what is on-screen in the cab of the tractor.

## DATA MANAGEMENT

**CONNECT AND SECURELY SHARE YOUR FARM DATA.**

Gain relevant agronomic insights that connect you to your farm down to the field level.

- ✓ MyPLM Connect helps you seamlessly manage, share and move data—all while ensuring you stay in complete control.
- ✓ Securely share your data and relevant equipment information with trusted partners.
- ✓ Invite your dealer to view relevant farm, field or field operation data for fast, transparent communication.

**Remote services to keep you connected.** We know you have other commitments in the community or with your family that take you away from your operation. With PLM Intelligence you don't always have to be in the cab of the tractor to see what the operator is seeing. You can remotely view the IntelliView 12 display from wherever you might be. The PLM Intelligence platform connects your farm, fleet and data to help you make well-informed decisions.

### Remote Display Viewing

No matter where they are, a farm manager or dealer can easily see exactly what the operator is seeing on the IntelliView 12 display screen in the cab.

### Remote Service Support

There's no time for downtime. Now you can work with your local New Holland dealer to remotely diagnose maintenance and service issues to identify parts you need to stay up and running.

### Remote Software Updates

Update your vehicles operating software wirelessly to take advantage of new features, functionality, and enhancements.

# A closer look at what powers your profits.

Take a closer look at the T9 Series with PLM Intelligence advantages that improve your productivity, decrease your cost of ownership and boost your bottom line.

## Power, strength and efficiency that's tested and proven

New Holland backs its claims of strength and efficiency with a series of tests conducted by the Nebraska Tractor Test Laboratory (NTTL). These tests found **the complete T9 Series tractor line features best-in-class power, torque, and overall fluid efficiency.** That means your operation benefits from more power to the ground and to implements, better fluid efficiency, and reduced fluid and labour costs.

## Ready for precision

Every T9 tractor is factory-ready to farm with precision using New Holland's full range of optional Precision Land Management (PLM™) solutions.

## Auto Command™ CVT

T9 Series tractors are the first articulated high-horsepower 4WDs with a Continuously Variable Transmission (CVT). Choose from 10 configurations with up to 560 max horsepower that deliver improved productivity, huge versatility, superior efficiency and limitless control.

## Ultra Command™ Powershift

New Holland's proven powershift transmission saves you fuel and time. The latest improvements reduce the time it takes to shift and shuttle. You can shift from gear 1 to 16 in 20% less time and shift from forward to reverse 38% faster. The result: Ultra Command uses less fuel, decreases operating costs and reduces fatigue.

## T9 Series with PLM Intelligence™ offering

Models	T9.450	T9.505	T9.560	T9.615	T9.670

● Standard

### Tri-Point oscillation delivers benefits for you in any application

Whether you're seeding, levelling, cultivating or applying nutrients, New Holland's exceptionally robust articulated Tri-Point chassis ensures precision ground-following and smooth transfer of power to the ground to improve performance and results. The centre section has a large top link that extends from the front frame to the very back of the rear frame transferring dynamic loads more efficiently and maximising your pulling capability, which in turn lowers fuel usage. In addition, this tri-point oscillation ensures well-balanced weight transfer between the front and rear axles so significantly less ballast is required to reduce compaction.

### Massive, heavy-duty axles built for the job

Regardless of the model you choose, T9 Series axles are built to stand up to high torque loads. Planetary input gears offer the ultimate in quiet comfort too. The massive 5.5-inch-diameter, heavy-duty axles with 18-bolt hubs carry up to 66,000 pounds of gross vehicle weight and offer superior braking. What this means to you is greater strength, durability, and reliability.

### Terralock™ traction management

Terralock is standard equipment and automatically manages four-wheel drive and the engagement of front and rear differential lock. Of equal importance, the system takes care of disengaging 4WD when you apply the brakes and when working at high speeds.

# The ultimate in farming comfort.

---

You'll appreciate the all-new fit and finish and automotive quality of the T9 Series cab. The ergonomic, spacious and practical environment is a must for day-long productivity.

## Cab options

New Holland offers you superior comfort and seating with two different cab options.

The **Deluxe Performance cab** features a cloth seat with leather trim, a semi-active suspension and comfort-heating capabilities.

For a premier seating experience consider the **Luxury Performance cab**. Enjoy semi-active suspension and heating capabilities in this seat too, but it's also all-leather and is equipped with a ventilation system that cools and removes moisture to keep operators comfortable and productive when spending extended hours in the tractor.

### All-day comfort

The exclusive four-point cab suspension masterfully controls front-to-back, side-to-side, and up-and-down motions to ensure that you are as comfortable after a long day's work as you were before you started.

### Settle in and enjoy the ride

The Comfort Ride™ cab suspension is revolutionary. All four corners of the cab are suspended on spring and damper units with a sophisticated anti-sway system to ensure you get a smooth and stable ride. The Comfort Ride suspension is offered on all models and is standard on SmartTrax™ II models.

# Your home away from home.

Everywhere you turn inside the T9 Series cab you'll find features—big and small—that make you feel right at home, even on the longest days behind the wheel. Climb aboard and take a look around.

## Intuitive climate controls

The entire air-conditioning system has been redesigned with a powerful two-zone cooling system and precisely positioned vents to ensure whole body comfort. All controls have been ergonomically relocated to the SideWinder™ Ultra armrest, making on-the-go adjustments even easier.

## Convenient and connected

We put more storage and cupholders in the newly redesigned cab than ever before to ensure maximum comfort. Technology has become part of our lives, too. You'll always be connected with features like 26 total power charging outlets, 12V power ports and exterior camera inputs to keep your devices fully powered.

## High-quality audio

The integrated radio allows every operator to play their own MP3 music recording and receive crystal-clear radio signals. Get full access to weather radio channels, too.

## Find the right position

The steering wheel now has separate tilt and telescopic adjustment as standard, which makes it even easier for you to select a comfortable working position—invaluable when spending long hours in the field or on the road.

## LED power and performance

Lighting up the way for improved night-time productivity and total safety—it's a key priority we achieve by bringing the latest automotive-sector innovations, like LED technology, into the farming world. For hardcore operators who work around the clock, you're covered with our Performance Plus lighting package that provides 360-degree lighting system to turn darkness into light. As an added feature, all of our lighting packages can be configurable through the IntelliView™ 12 display to turn on or off certain light patterns.

# SideWinder™ Ultra: the ultimate ergonomic farming experience.

T9 Series tractors offer sophisticated features that are easy and intuitive to access. The SideWinder™ Ultra armrest hosts all key controls, including throttle, transmission and hydraulics. Everything you need to control is intuitively selected. More advanced features can be quickly accessed.

## Customisable buttons

Up to 11 buttons can be personalised and configured on the SideWinder™ Ultra armrest. Located in strategic positions around the armrest: one on the multifunction handle, two on both the joystick and main keypad, four on the rear keypad, and one or two on the throttle/transmission keypad (depending on the transmission option selected). These buttons can be configured to suit both the task at hand and the specific preferences of the operator.

## Adjustable SideWinder™ Ultra armrest

The SideWinder™ Ultra armrest can be adjusted to suit your specific requirements. Two manual levers adjust both the height and front/back position of the armrest for enhanced ergonomic operation.

Front or rear linkage control selector

Thumb wheel for position / draft setting

CommandGrip™ handle

STOP button to disengage hydraulics, PTO and linkage

Fingertip control for up to two remote valves

Front and rear linkage raise/lower

Headland Turn Sequencing II (HTS II). Press to record, store and activate automated headland turn

Forward / reverse shuttle and neutral buttons

IntelliSteer™ auto-guidance, automated steering engagement

1 of 11 configurable buttons

Fast raise, lower and dig buttons

Store depth button

Position or draft selector

Main tractor functions shortcut buttons

Terralock™ engagement for automatic management of four-wheel drive and differential lock selection

Light configuration buttons

Three stage acceleration and deceleration setting

1 of 11 configurable buttons

Stored Engine Speed Management settings 1 and 2

Ergonomically positioned hand throttle

Multifunction joystick can be set to operate the front linkage or remote valves

Tractor speed increase / decrease

Forward / reverse shuttle switch

2 configurable buttons

Configuration screen shortcut button

Screen back button

Phone, radio and media controls

Climate controls

Intentional PTO switch, which must be selected to keep the PTO engaged when leaving the operator seat

Engage and disengage the front and rear PTO instantly

Auto PTO will disengage and re-engage both the front and rear PTOs during a headland turn

5 configurable hydraulic valve levers

Thumb wheel encoder

Sliding padded armrest can be adjusted for increased elbow support when using the joystick or CommandGrip™ handle

Front and rear linkage limits settings

4 of 11 configurable buttons

# Intelligent monitors for intelligent agriculture.

The all-new IntelliView™ 12 monitor delivers a wide range of machine benefits at your fingertips. A clear evolution from the former IntelliView™ IV, the new “12” model – with its sleek, automotive style “dash” styling, intuitive display and modern design – will become the benchmark of the future.

### InfoView™ dash display

The large LCD flat screen display positioned directly in front of the steering wheel is your “at a glance” machine dashboard. It features a host of key operating parameters such as engine rpm, forward speed and selected gear.

### Fully customisable

In the IntelliView™ 12 monitor's standard operational layout, the screen is divided into four main areas:

- The top bar allows the operator to access tractor and operation settings.
- The run screens are located on the bottom bar and are customisable and always accessible.
- The main part of the screen is composed of the user-selected run screens, which show key parameters related to the task at hand.
- The left-hand side is another user definable window, which contains primary operating parameters such as fuel rate and slip.

### Perfect view

In order to enhance transport safety, a viewing camera has been integrated into the hood. When approaching a traffic junction, this enables you to “see forward” for improved road safety. An additional advantage is that you have a perfect view of front-mounted implements, both while working in the field and when connecting in the yard.

# Proven design, modern control.

## The full powershift, now even more tough

New Holland has toughened up its already proven Ultra Command™ full powershift transmission. Now with added strength and improved control, it is truly something special. It gives you the benefit of a new control system using the CommandGrip™ handle for fingertip access to “manual” push button shifts and automated Ground Speed Management. A Hi-Lo dual power is fitted to gear 16, allowing you to quickly increase maximum transport speed from 31 to 40 kph.

## GSM. Intelligent automation.

New Holland Ground Speed Management (GSM) is more than just an automated transmission shift system. Simple to set up and extremely efficient, GSM is a dependable way to reduce operator fatigue and fuel consumption to increase your overall productivity. With CVT-like functionality, it uses a combination of data relating to engine load, forward speed and operator setting, to manage both engine and transmission speeds to optimise performance and economy.

## Fixed forward speed? GSM takes care of it.

When load conditions change in the field, GSM automatically maintains a fixed forward speed. Just set your desired working speed and then select the GSM function. The automated system then matches engine and transmission speeds to maintain this fixed forward speed, to deliver the perfect balance between maintaining productivity without compromising economy.

**Full command in transport**

During road transport, GSM will automatically shift the transmission according to load and throttle settings. With heavy loads, GSM downshifts to assist with engine braking on steep inclines.

# Monster power. Total control.

When you pair the extreme power of T9 Series tractors with the precise control of the Auto Command™ continuously variable transmission (CVT), you make your workday more comfortable and productive even in the most demanding conditions.

## Improved productivity — from 3.0 fpm to 40 kph

The Auto Command transmission is easy to operate so you can remain productive all day. It provides faster acceleration to road speed at 1,650 engine rpm, and gives you maximum speed control. Use three adjustable target speeds to match your every need. Simply set your target speed anywhere between 3.0 feet per minute right through 40 kph and regulate it to the nearest 0.016 kph. No steps. No range changes. Just seamless speed changes to match the jobs you do, from seeding to hauling and running grain carts.

## Huge versatility

The Auto Command transmission allows for easier slow-speed operation, more precise speed control for high-value crops and added safety when backing up to hookup large implements.

## Superior efficiency

Using Auto Command saves you fatigue and fuel. You get automated efficiency without operator input, and can operate at peak power for any forward and reverse speed.

### Limitless control

The Auto Command responds to the amount of force you apply to the CommandGrip™ controller. Move the lever gently for gradual response, aggressively for quick response. Other controls are just as intuitive thanks to New Holland's award-winning SideWinder™ Ultra armrest with fully integrated IntelliView™ wide touchscreen display. You can specify your T9 Series tractor with fully integrated IntelliSteer™ auto-guidance for sub-inch accuracy.

Force based movement enables the operator to change speed and direction. On the ICP there is a switch to alter the response of the speed change. Forward speed can also be controlled using the foot pedal.

Target speed adjustment — set a target speed and then infinitely adjust that speed to match your exact needs. Perfect when moving between fields or when crop yields have altered.

Target speed selection — allows you to change between three target speeds.

### Driving modes suit your driving style

- **Auto Mode.** Select the desired target speed and Auto Command matches the engine and transmission to maintain it.
- **Cruise Mode.** Set Auto Command to maintain a desired operating speed for economy and productivity.
- **Manual Mode.** Set the required engine and forward speed, independently of each other.
- **PTO Mode.** As soon as the PTO is engaged, Auto Command guarantees a constant engine speed.

### The simplicity and peace of mind of Active StopStart

When you bring the tractor to a standstill, Auto Command prevents the tractor moving backwards or forwards, even with a heavy load. When you release the brake pedal, drive re-engages and the transmission assures there is no risk of roll back on steep inclines. Imagine the efficiency you'll gain when transporting or during frequent shuttling. That's Active StopStart.

# Intelligent SmartTrax™ II and tyre options tailored to your operation.

## SmartTrax™ II: High traction, low compaction

Put one of New Holland's five T9 Series SmartTrax™ tractors to work for you and you get the benefit of 2,800 square inches of ground contact per track module for a total footprint of 11,200 square inches. That maximises traction, flotation and ride smoothness, while reducing ground pressure and compaction for minimal surface damage, and that improves soil fertility and water drainage, maximising your yields.

## LSW Singles: Low compaction, narrow-width roading

The next generation of tyre solutions comes with Low Side Wall technology — powerful, rugged, balanced, and power hop resistance all wrapped up in a single tyre solution. While increasing the rim diameter but not increasing the tyre diameter, a lower side wall results in a tyre with more stability for heavy pulling and roading applications and high ground area contact — yielding more productive results for your operation.

## High Flotation or Row Crop Duals, Triples: Less compaction and fuel usage

Tailor your dual or triple tyres to your operation, whether it's roading, heavy pulling or row crop applications. High-flotation duals feature an IF rating that produces a stronger tyre to carry heavy loads at lower tyre pressure. This results in less compaction and fuel usage. Row crop applications require the proper tyre to decrease compaction and maintain traction throughout the tyre's lifetime, all to improve yields year after year.

Models	T9.450	T9.505	T9.560	T9.615	T9.670
SmartTrax™ II				●	●
LSW Singles	Available on all models except Scraper				
Row Crop Frame Duals	Available on Row Crop Frame			Available on High HP Frame	
High Flotation Duals	Available on all models				
Triples	Available on all models				
Rated HP	400	450	500	535	600
Transmission	UltraCommand™ Powershift or AutoCommand™ CVT			UltraCommand™	
Cab Suspension	Standard on all models				

## Exclusive SmartTrax™ design: Performance advantages that just keep on pulling.

**LIGHTEST GROUND PRESSURE  
HEAVIEST PULLING  
MEETING YOUR DEMANDS**

New Holland SmartTrax II gives your T9 Series tractor the lightest footprint and the heaviest pull, resulting in the ultimate-productivity tractor. SmartTrax II is a choice that best suits your terrain, your applications and your budget.

- 1 **The largest drive wheel in the industry** measures a massive 56.3 inches in diameter — that's 30% larger than the nearest competitor
- 2 **13 to 14 drive lugs are fully engaged at all times**, eliminating slippage between the drive wheel and track. This also reduces the load per lug compared to other designs, which increases belt durability. More power is transmitted through more drive lugs for better power distribution and extended track life
- 3 **The axle position of the SmartTrax II design results in a low centre of gravity**, which improves total vehicle stability
- 4 **Designed with no mid-roller** directly under the track module pivot point to reduce over-centre ride impact for maximum operator comfort

SmartTrax™ II		
Track Module Weight, w/ Ag Belt	lbs. (kg)	5,600 (2545)
Track Module Height	in. (mm)	67 (1701)
Track Module Length	in. (mm)	86 (2183)
Belt Width	in. (mm)	36 (914)
Ground Contact Area	sq. in (sq. cm)	2,800 (18,065)
Maximum Ground Speed	mph (kph)	19 (31)

### Rugged durability, less maintenance, more uptime

- **All bearings are sealed and lubricated for a lifetime** with annual maintenance
- **No daily greasing** as there are no grease fittings
- **Check the bogey and idler wheel oil levels only once a year** and change at 5,000 hours
- **No need for complex alignment adjustment mechanisms** that need to be adjusted, serviced, and replaced. The SmartTrax II rigid undercarriage shaft bores are machined in one operation to ensure excellent alignment between bores, plus New Holland uses straight steel cables in the heavy-duty belts

A heavy-duty scraper cleans the drive wheel and drive lug area of dirt and debris to avoid misalignment and increased belt wear.

A sight gauge permits simple observation.

An integrated accumulator/tensioner automatically adjusts belts for proper tension.

## Low Side Wall technology: Solutions for high flotation, heavy pulling, and roading applications all in a single tyre.

**NARROW ROADING  
HIGH FLOTATION  
HEAVY PULLING  
MEETING NEW DEMANDS**

New Holland T9 Series tractors can now be equipped with Low Side Wall (LSW) tyres to meet the new demands of producers looking for high flotation, heavy pulling, and a narrow overall package for roading applications. LSW tyres feature the ability to maintain high load ratings at 40% lower inflation psi values, opening new productivity value to a single tyre combination. The larger rim diameter — without increasing the overall LSW tyre diameter — results in a more stable tyre for the toughest applications.

When equipped with LSW1250/35R46 singles, the overall width measures about 150 inches or 12.5 feet. This narrow roading width, in combination with a light footprint, provides a middle ground when choosing between SmartTrax and high-flotation duals.

Low Side Wall tyres design features a larger rim diameter without increasing the overall tyre diameter, providing more stability for heavy pull and roading applications.

As the aspect ratio of a tyre increases so does the chance for bouncing during roading and power-hop in in-field heavy pull applications. LSW tyres eliminate those chances with a lower aspect ratio.

With LSW singles, total psi on the ground is comparable to high-flotation duals on tractors with similar gross vehicle weight — but yields a nearly 20% reduction in overall tyre width.

## The Dual and Triple threat: Tyre combinations to meet your row crop or high-flotation needs.

**IN-ROW APPLICATIONS  
HIGH FLOTATION  
HEAVY PULLING  
MATCH TO YOUR NEEDS**

New Holland T9 Series tractors utilise the Row Crop frame on models up to the T9.560. When used in combination with VF Row Crop tyres, they maintain load carrying capacities at lower air pressure ratings — producing less compaction, less fuel consumption to promote bottom line returns. High flotation duals can also be equipped with this technology, further improving fuel consumption in heavy-pull applications. Triples distribute the overall weight of the T9 Series tractor over even more area, decreasing compaction for your specific application.

**Row Crop Frame and Row Crop Duals are perfectly matched for row-crop applications**

Spring tillage, planting, post emergence side-dressing, grain carting, roading, and fall primary tillage—there is no application that the T9 Series tractor can't handle.

**High Power Wide Frame and High Flotation Duals provide the power to where it's needed**

Heavy-pull applications call for the High Power Frame matched with high-flotation tyres. Tyre designs featuring improved traction capabilities are made for these kinds of applications.

Grain cart applications with VF dual tyres (Row Crop Frame shown) allow for high-speed, low-pressure inflation, which lessens soil compaction while boosting fuel economy. Through less compaction, the T9 Series tractor improves your harvest and yields the following year.

## Rugged design meets perfect balance.

### Up to 20,000-pound hitch lift capacity

All models can be equipped with a CAT IV-N quick-hitch rear linkage, convertible to CAT III on standard frame models. Lift capacity rises to more than 20,000 pounds on standard frame tractors, in line with the high power output of the T9.560. A 20-spline 1000-rpm speed PTO option is also available.

### The right balance

It takes experience to ballast an articulated tractor correctly. Get the weights wrong, and performance, fuel use, soil compaction and productivity can all suffer. At New Holland we have established ballast guidelines that make it easier to optimise ballast, with purpose-developed weight packs that can be tailored to match your needs.

### Drawbar options to suit your needs

A heat-treated two-position agricultural solid bar is fitted to standard frame models. A heavy-duty Class 5 is offered on wide-chassis models. Max permissible tongue weight can reach up to 15,000 pounds on Ag models and 20,000 pounds on scraper models, dependent on drawbar choice.

# Impressive hydraulic flow to handle the largest implements.

---

## Up to 427 lts per minute

T9 Series tractors are made available standard with MegaFlow hydraulic pumps, delivering a total flow to all hydraulic remotes of 427 lpm. For extremely high hydraulic demands like seeding and planting, choose the MegaFlow™ II option. A large coupler is available for applications that demand unrestricted oil flow.

## Save time and effort with Custom Headland Management

New Holland has refined and developed Custom Headland Management for easier setup and use. For complex applications, including operating the very widest tillage equipment, Custom Headland Management truly does reduce fatigue and help remove the repetition from your day so you can concentrate on what's really important. Use Custom Headland Management to manage some operations but leave others to manual control — the choice is up to you. Set up is simply a case of recording the desired operations at the headland. These actions are then repeated, automatically, by pressing the dedicated button on the CommandGrip™ handle.

## Up to eight electronic remotes

T9 Series remote valves are easy to identify with colour-coded couplers and levers. You control all eight remotes without moving away from the SideWinder™ Ultra armrest, allowing you to identify and work each remote with exact precision. Four remote levers are on the armrest and two valves are controlled either using the two additional paddles located to the right of the IntelliView™ monitor, by using the CommandGrip™ handle or by using the electronic joystick. You can set flow, timing and detent settings to precisely match the job. Each valve can also be programmed with Custom Headland Management.

## Hydraulic remote valve management

It is now even easier to control hydraulic functions, as each hydraulic remote valve is indicated by a coloured LED paddle. The remote paddle position on the SideWinder™ Ultra armrest is completely configurable, so operators can choose which paddle operates which hydraulic remote. This makes it easier to customise usage based on application and operator preference.

## Quick and simple flow control setting

The IntelliView™ 12 touchscreen monitor makes setting flow rates to individual valves simple. Scroll through the menus and select valve control. Choose the outlet you wish to adjust, and drag the slider with your finger to the desired setting or use the front armrest encoder wheel. Job done.

31-53 Kurrajong Road, St Marys NSW 2760

Safety begins with a thorough understanding of the equipment. Always make sure you and your operators read the Operator's Manual before using the equipment. Pay close attention to all safety and operating decals and never operate machinery without all shields, protective devices and structures in place.

The data indicated in this folder are approximate. The models described here can be subjected to modifications without any notice by the manufacturer. The drawings and photos may refer to equipment that is either optional or intended for other countries. Please apply to our Sales Network for any further information.
